Mramoterm

By applying our extensive experience of using stone in heating, forward thinking and innovative technology, we have produced a healthy & simple, economical & ecological as well as aesthetically complete solution to your heating needs. Made from natural materials of high heating capability, the Mramoterm Heating Slabs have a beautiful look and an unlimited life span. We are proud to stand behind thousands of satisfied customers as a true testament of our high quality and craftsmanship.

The Complete Solution

Quick and easy to install, our vast range of stone types complements the look and feel of any room. The heating slabs can be used as a partial or complete form of heating. They can be safely installed in humid areas such as bathrooms, shower-rooms, en-suites etc.

Low installation cost can be achieved by avoiding the need to lay pipes under the floor, making this the ideal solution for extensions, renovations, new constructions, property developers and the commercial sector. Further cost saving is achieved by completely eliminating the need for maintenance, service & repair. All Mramoterm Heating Slabs are backed by a 10 Year Manufacturer Guarantee.

THE COMPLETE SOLUTION

Energy Saving and Efficient Usage

Mramoterm Heating Slabs reach their maximum efficiency, and lowest use of energy, by means of integrated thermal regulation (thermostats). If used over a 24 hour period they can maintain an optimum balance of energy consumption, comfort and warmth. Maintaining a comfortable room temperature in an averagely insulated room with the Mramoterm Heating Slab leads to a 25-50% reduction in energy consumption compared to other forms of conventional heating.

Healthy and Comfortable Living

Mramoterm Heating Slabs heat by radiation (just like the sun heats the earth) rather than by convection (the flow of hot and cold air) - helping to maintain an even temperature throughout the room.

This prevents the circulation and movement of dust particles and eliminates the drying out of air, all in the interest of your health and well being - making it especially effective for asthma and other allergy sufferers. Mramoterm Heating Slabs do not contain any moving parts that can cause vibrations or noise.

Safety is ensured through a layered insulation of electrical cables and heating elements thus completely eliminating the possibility of electrical shock or scalding through touch. Mramoterm Heating Slabs conform to all necessary standards in health and safety.

EASY TO FIT

The heating slabs can be mounted vertically or horizontally, depending on your requirements.

THERMOSTATICALLY CONTROLLED

Accurate installation and positioning of thermostats ensures the whole area is heated evenly.

MOUNTING BRACKETS

Universal size - fits all radiator dimensions. Available in a range of colours to match your choice of stone.

INTERNATIONALLY RECOGNISED QUALITY

Constant innovation in development, investment in production and technological advancement have allowed us to perfect our product. We have completely eliminated the risk of cracking of the slabs and in doing so achieved an infinite lifespan.

We have enhanced our safety measures according to all global standards. This was affirmed by gaining CE recognition from the TUV Institute in Austria as well as recommendations by the TUV Institute for a quality product. We are one of the first manufacturers of marble and stone heating slabs fully compliant with new European standards and norms (EN 60 335) and VDE recommendations, (soon to become the new standards). We are currently using materials that are several times higher quality than is demanded by these new global standards. This reinforces the quality and global standing of our brand.
